Sync-Folder Version 1.0.0 Release Notes

Module Files

The following files make up the **SyncFolder** module. Install all files to the desired location.

- SyncFolder.psm1 – module script file

- SyncFoilder.psd1 – module manifest file

Installation

The script can be installed for a specific user or for all users with accounts on the machine. Choose the desired operation and copy the script files to specified folder. Start a new PowerShell console.

For specific User

$home\Documents\WindowsPowerShell\Modules\SyncFolder\<Module Files>

For all Users

$env:ProgramFiles\WindowsPowerShell\Modules\SyncFolder\<Module Files>

Verification

To verify the cmdlet is installed and ready to use, open a new PowerShell console and type the following command:

Get-Command -Module SyncFolder

If no cmdlet details are displayed, the module is not installed.

Usage

Once installed, the cmdlet should be available from any PowerShell console. Help is built in the cmdlet. Use the following command to show help. This help will show syntax, a description, and examples.

Get-Help Sync-Folder -full

Since this cmdlet will change a directory, and potentially overwrite files, the user will always be prompted for a confirmation.
